

Hatenboer-Water Consultancy

Risk management is an important part of our HSE plan. It is the objective of Hatেনboer-Water to contribute to the safety of man and machine on board. We offer consultancy services for existing systems and for new builds. Our vast maritime and offshore experience guarantees we can provide you with practical advices which easily can be incorporated.

Consultancy and subsequent guidance

Hatenboer-Water can take care of consultancy and subsequent guidance for all your water related businesses. For example: Our consultant can do a (preliminary) legionella and water hygienic risk assessment based on the PI&D and other ship drawings. The shipyard can incorporate the recommendations immediately in order to save time and costs afterwards.

Risk Assessment

Determination whether the drinking water supply from source (treatment) building to the point of consumption meets the health-based targets.

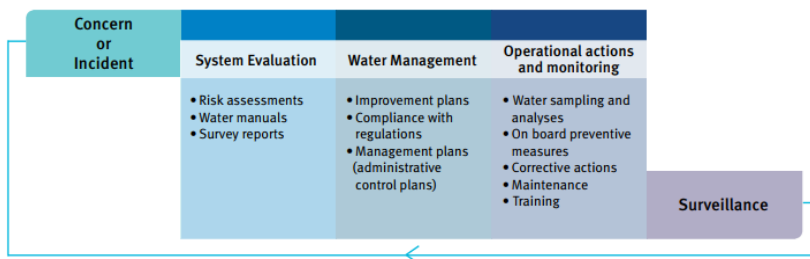

Management Plan

Hatenboer-Water, specialist in maritime water treatment, has included in its extensive package of services a Legionella risk assessment, especially developed for the shipping industry. With our experience in all matters of water, bacteriology, installation technology and shipping, we come on board and draw up a water safety plan that is tailored to deal with the practical situation.

Audit

Hatenboer-Water consultants provide audits of your water safety plan. Based on the existing management plan, our consultant will inspect the complete fresh water system and verify if the list of improvements and the recommendations are carried out accordingly.

Close your water safety-loop

Problems that you can encounter

- Corrosion
- Biofilm
- Bacteriological contamination
- Physical-chemical contamination
- Problems with coatings of drinking water tanks
- Various other issues that might be a threat to your crew's health

You are able to prevent these issues by using our expertise in potable water quality, equipment and installation technologies.

Lay-out and specs for new builds

Hatenboer-Water offers also consultancy services for ship designers, yards and owners on the specific piping and system lay-out for new builds in order to prevent Legionella and other micro-biological fouling. More strongly, Hatেনboer-Water advises its relations to consult the Water Quality department to save time and costs afterwards.
