

Water Bottle Filling Station

Blusoda 30 Counter top Plastic-Free@Sea

Small, compact and stylish

The counter top bottle filling station makes chilled water continuously available. It is connected directly to the drinking water distribution system. This makes purchase, storage and replacement of water bottles history. Resulting in a considerable cost saving. On locations where the drinking water quality is questionable.

The cooler can be equipped with high-end filtration systems providing fresh and safe water 24/7.

This stylish and compact version ensures that the water cooler is ideal for maritime use where space is limited. Due to the compact size this cooler is mostly found on the bridge and accompanied by the MRS225 Reversed Osmosis filtration unit.

Ambient, cold and sparkling water

The Bluesoda 30 cooler can also be equipped with a food grade CO² gas tank to produce cooled and filtered sparkling water on the spot. All connections are included but CO² bottles are not delivered by Hatlenboer-Water.
